NAG C Library Function Document

nag_rngs_lognormal (g05lkc)

1 Purpose

nag_rngs_lognormal (g05lkc) generates a vector of pseudo-random numbers from a log-normal distribution with parameters μ and σ^2.

2 Specification

```
void nag_rngs_lognormal (double xmu, double var, Integer n, double x[],
     Integer igen, Integer iseed[], NagError *fail)
```

3 Description

The distribution has PDF (probability density function)

$$f(x) = \frac{1}{x\sigma\sqrt{2\pi}}\exp\left(-\frac{(\ln x-\mu)^2}{2\sigma^2}\right) \quad \text{if } x > 0,$$
$$f(x) = 0 \quad \text{otherwise,}$$

i.e., $\ln x$ is normally distributed with mean μ and variance σ^2. nag_rngs_lognormal (g05lkc) evaluates $\exp y_i$, where the y_i are generated by nag_rngs_normal (g05lac) from a Normal distribution with mean μ and variance σ^2.

One of the initialisation functions nag_rngs_init_repeatable (g05kbc) (for a repeatable sequence if computed sequentially) or nag_rngs_init_nonrepeatable (g05kcc) (for a non-repeatable sequence) must be called prior to the first call to nag_rngs_lognormal (g05lkc).

5 Parameters

1: **xmu** – double *Input*

On entry: the mean, μ, of the distribution of $\ln x$.

2: **var** – double *Input*

On entry: the variance, σ^2, of the distribution of $\ln x$.

Constraint: **var** ≥ 0.0.

3: **n** – Integer *Input*

On entry: the number, n, of pseudo-random numbers to be generated.

Constraint: **n** ≥ 0.

4: **x**$[dim]$ – double *Output*

Note: the dimension, dim, of the array **x** must be at least $\max(1, \mathbf{n})$.

On exit: the n pseudo-random numbers from the specified log-normal distribution.

5: **igen** – Integer *Input*

On entry: must contain the identification number for the generator to be used to return a pseudo-random number and should remain unchanged following initialisation by a prior call to one of the functions nag_rngs_init_repeatable (g05kbc) or nag_rngs_init_nonrepeatable (g05kcc).

6: **iseed**[4] – Integer *Input/Output*

On entry: contains values which define the current state of the selected generator.

On exit: contains updated values defining the new state of the selected generator.

7: **fail** – NagError * *Input/Output*

The NAG error parameter (see the Essential Introduction).

6 Error Indicators and Warnings

NE_INT

On entry, **n** = ⟨*value*⟩.
Constraint: **n** ≥ 0.

NE_REAL

On entry, **var** = ⟨*value*⟩.
Constraint: **var** ≥ 0.0.

NE_BAD_PARAM

On entry, parameter ⟨*value*⟩ had an illegal value.

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please consult NAG for assistance.

7 Accuracy

Not applicable.

8 Further Comments

None.

9 Example

The example program prints five pseudo-random numbers from a log-normal distribution with mean 1.0 and variance 2.0, generated by a single call to nag_rngs_lognormal (g05lkc), after initialisation by nag_rngs_init_repeatable (g05kbc).
